Steven Halim posted on FB…

while he was grading HW1-S1(a)

Steven Halim
February 7

You know a student is "copying" senior's report when a subtle stuff in the question is changed but the student's answer is exactly as last sem's answer without that subtle change... ><

Steven Halim Yes, HW1. Who are the players of "Guess the number game" this sem?
February 8 at 12:01am · Like · 2

Eva Kristina Hahaha.... the student didn't really understand the core of the problem, just memorizing it without deep thought. 😛

Proof or Non-Proof?

Theorem: Prove that all horses are black.

Proof-1: Today, I saw a black horse on tv.

Proof-2: This horse is black. The 5 over there are black. And 3 from Sentosa are black too.

Proof-3: See, I can show you 3142 black horses. I think all the rest are the same.

(what if I change 3142 to 965378241?)

Proof-4: Don Knuth says it's true, so it must be!

How to do mathematical proofs?

Direct proofs

Proof by Mathematical Induction

Proof by Contraposition

Proof by Contradiction

Proof by Construction

Proof by Exhaustion

Probabilistic Proof

Combinatorial Proof

Non-Constructive Proof

See more explanations in the wikipedia article.

All Horses are Black

(2014 is year of the Horse)

From my jokes file

Copyright © by Leong Hon Wai

All Horses are Black…

Philosopher, Physicist, Mathematics
travelling by train through Texas, USA

Through the window of the train,
they saw a black horse.

Copyright © by Leong Hon Wai

All Horses are Black…

Philosopher: "Aha!

I see that Texas horses are black."

Physicist: "Hmm!

You mean that some Texas horses are black."

Mathematician: "No!

All we know is that

there is *at least one* horse in Texas, and that

at least one side of *that one horse* is **black**."
